

## Tyre policy & hard evidence as to why it is critical:

Certainly never in my lifetime will transport not need tyres. Perhaps one day the sci-fi movies of flying and time shifting transport without tyres will be common, until then listen up.

Dave Scott of Dave Scott and Associates, in conjunction with Craig Proctor-Parker of Accident Specialist have teamed up and formulated a proactive and specific one hour training presentation on the subject matter. The

presentation initially walking you through a tyre policy, highlighting the importance thereof, with Mr Scott delving somewhat deeper into the critical issues. The presentation then provides an eye opening insight into real world local cases compiled by Mr Proctor-Parker, where total neglect of tyre maintenance have led to catastrophic and unnecessary death.

The presentation was recently launched at the Supa Quick fitment centre of Angie and Warrick Frederic at Shop 45-47 Oxford Village, on Hillcrest Old Main road. Their facilities and business being an appropriate partnering of the subject. Their involvement in the presentation in arranging and facilitating, is testament to their drive and passion and is reflected in their facilities and services provided.

Attendees were a broad spectrum, from individual motoring clients, to fleet owners, managers and Occupational Health and Loss practitioners, as well as Bridgestone/Firestone representatives. The presentation will be provided on an ongoing basis to the presenter's clients and all interested parties, with a copy of the guiding policy and presentation made available to those that attend. Contact the presenters directly should you be interested.
